

The Planet Waves Speaker Connectors are a revolution in speaker wire termination. No stripping! No twisting! Connection via the gold-plated pin is direct to the connector.

The connection pin inserts directly into the speaker wire, enabling 360 degree contact with the wire while it is within its jacket. The design virtually eliminates oxidation over time. The patented screw holds the wire securely in place and will not loosen.

Connectors are gold-plated, fully tested for superior signal transfer, and feature shallow depth.

Planet Waves Speaker Connectors are available in three versions and are engineered to terminate 12 AWG, 14 AWG, or 16 AWG wires according to SKU.

Color rings are sold separately.

Product Specifications

| | |
|----------------------|---------------------------|
| Available Gauges | 12 AWG, 14 AWG, or 16 AWG |
| Contacts | Gold-plated |
| Finish | Chrome body |
| Color Rings Included | No |
