

4Cabling Single Monitor Arm - Mechanical Spring

Product Images

4Cabling Single Monitor Arm - Mechanical Spring

This Single Monitor Bracket with mechanical spring action offers you similar functionality as a gas spring monitor arm at a much more economical price and without the bulky gas cylinder. With an ergonomic design, the preset spring tension allows you to effortlessly adjust most monitors from 17"-32" or 2kg-8kg to your desired height.

The folding action makes it easy to adjust to the correct focal distance to reduce eye fatigue. Mounting the bracket to your desk is simple with the innovative quick on/off VESA plate that allows you to mount or replace your monitor by yourself with the use of the heavy-duty clamp.

A clutter-free desktop is important for productivity, and the built-in cable management keeps your desktop organised. The Dual Monitor Arm not only looks good but also has great functionality.

May not be suitable with VESA mounts that are recessed
