^{dagger;}Maximum wireless signal rates are the physical rates derived from IEEE Standard 802.11 specifications. Actual wireless data throughput and wireless coverage are not guaranteed and will vary as a result of 1) environmental factors, including building materials, physical objects, and obstacles, 2) network conditions, including local interference, volume and density of traffic, product location, network complexity, and network overhead, and 3) client limitations, including rated performance, location, connection, quality, and client condition.

^{dagger;}Zero-Touch Provisioning requires the use of Omada Cloud-Based Controller.

^{sect;}Seamless Roaming requires that clients need to support 802.11k/v and may require additional set up. Performance may vary depending on the client device.
