TP-Link Archer VR400 - AC1200: Wireless MU-MIMO Gigabit VDSL/ADSL Modem Router

Archer VR400 unlocks the full potential of your internet connection by providing combined dual-band WiFi speeds of up to 1.2 Gbps, including 867 Mbps on the 5 GHz band and 300 Mbps on the 2.4 GHz band, eliminating lag and buffering from your online activities. Two dedicated WiFi networks support more devices and reduce wireless interference to create stable connections.

Advanced VDSL2 technology allows Archer VR400 to deliver impressive VDSL broadband speeds of up to 100 Mbps—nearly 4x faster than ADSL2+. Archer VR400 serves as a DSL modem and wireless router, combining two devices in one.

Superior range and stability with two high-performance external antennas. This helps the Archer VR400 to create an expansive home network. Advanced Beamforming technology automatically locates wireless devices and forms targeted, highly efficient wireless connections.
