Description

Figure 8 Speaker Cable (168/0.16mm) 12AWG - 100m Roll

Looking for a high-quality and reliable home theatre speaker cable? Look no further than the Hills Antenna High Performance Speaker Cable, available in three different gauges: 16AWG, 14AWG, and 12AWG.

This speaker cable is extremely flexible and less likely to kink during installation, making it easier to set up your home theatre system. The red line polarity mark helps identify positive and negative connections for even easier installation.

Made of high-grade CCA (Copper Clad Aluminum), this speaker wire offers the same signal frequency and reliability in terms of corrosion resistance as copper wire, while also being lighter and more flexible. And with a lower cost compared to OFC (Oxygen Free Copper) wire, this cable provides the same functionality and reliability without breaking the bank.

Featuring a transparent clear PVC jacket and a high strand count for maximum conductivity and durability, the Hills Antenna High Performance Speaker Cable is the perfect choice for any home theatre setup. And with a 100mtr plastic spool, you'll have plenty of cable for even the most complex systems.
