

OE Elsafe: Wall Starter Side Entry - White

Product Images

Description

OE Elsafe's Wall Starter Side Entry connector. The wall starter and starter sockets are the connecting devices most commonly used to connect the modular soft wiring to the fixed wiring of the building. This is always a female connector. Wall starters are generally positioned in the same location as you might use a conventional power outlet, except in this case they are a dedicated latching 20A socket and are at the commencement of the soft wired circuitry.

Features

- Single Wall female side entry.
- 20Amp Socket.
- Colour: White.

Warranty

1 year limited warranty.
